1. INTRODUCTION

With the designation of large areas of bird breeding habitat as SSSI and, latterly, as SPA/Ramsar site, English Nature is increasingly called upon to assess the implications of proposed activities that may potentially affect breeding birds. Where such assessments are part of a formal request for consent, either from English Nature or a local planning authority, then reasonable justification for refusal will often be required. Additionally, under the Part 1 of the Wildlife and Countryside Act 1981 (WCA), all birds' nests are protected and it is an offence to take, damage or destroy the nest of any wild bird while it is in use or being built. Furthermore, for certain rare and vulnerable species (listed on WCA Schedule 1) it is an offence to intentionally or recklessly disturb birds while nest building or at or near a nest with eggs or young. Clearly, when advising on the implications of activities under SSSI/SPA legislation or under Part 1 of the WCA, it is important to have reliable information on bird breeding periods.

At present, assessments of activities affecting breeding birds are made with reference to the available published information on bird breeding periods (for example *Birds of the Western Palaearctic*). However, this approach has several limitations: firstly, as the breeding period is generally defined as the period between earliest egg-laying and latest fledging, there is no information on the core period which holds the greatest proportion of breeding attempts; secondly, the period of breeding is likely to vary greatly depending on region, with birds in northern England breeding perhaps weeks later than those in the south; and finally, with climatic changes as a result of global warming, it is possible that breeding periods for many species are now earlier than they were at the time when standard reference texts were produced. For these reasons, this report carries out a review of current breeding periods for a selection of breeding bird species across a range of habitats throughout England.

2. METHODS

Data from the BTO's Nest Record Scheme (NRS) were used to identify breeding periods for the species listed in Appendix 1 using only Nest Record Cards (NRC) from England. However, analyses were not conducted for all species as sample sizes were too small and data was not available for some species for England (Red-throated Diver and Greenshank). To identify breeding periods, the first egg laying date and first fledging dates were estimated for each NRC. Laying and fledging dates are generally not recorded on NRCs and have to be estimated by back-calculation, using information on the nest contents at each with reference to standard information on the timing of events within the nesting cycle (e.g. length of incubation and egg-laying periods, see Crick *et al.* 2003 for details). For each nest a range of possible laying and fledging dates are calculated and the mid-point used when the range is less than 10 days. Sample sizes differ between egg laying and fledging date estimates for each species because the uncertainty in their estimation depends on the timing of the visits to a nest. (For example, if nest visits occur mainly at the end of the nesting cycle, then fledging dates will be more precisely measured than egg laying dates). Initially, only records after 1990 were included, but when there were less than 100 nest records, all records before 1990 were also included in the analysis to increase the sample size.

For each species, 5, 50, 95 and 100 percentiles for first egg laying dates and fledging dates were used to identify the main breeding periods within the defined period (post-1990 or all records) where the sample size was greater than 50 estimable dates. When the sample of at least 100 records is available for the post-1990 period then percentiles are provided for this period only. In cases where the sample size is between 50 and 100 records for the post-1990 period then percentiles are provided for the entire time period also. A caveat of small sample size was placed on species with sample sizes of between 50 and 100 estimable dates.

To ascertain whether breeding was significantly different between regions, a Kruskal-Wallis test (Sokal & Rohlf, 1981) was used on the median value for first egg laying date and fledging date. To ensure that there were sufficient samples within each region, all records were used in the analysis (pre- and post-1990) and regions were excluded from the test if they had less than 100 records. For some species this left only two regions and so the equivalent test was the Mann-Whitney U test. Results are reported for those species which showed a significant result for the regional analysis based on Government Office Regions (GORs). These English GORs follow long-established county boundaries and include varying number of counties and Unitary Authorities and can be viewed graphically at http://www.statistics.gov.uk/geography/downloads/uk_gor_cty.pdf

3. RESULTS

The numbers of nest record cards for which first egg laying date and fledging dates could be estimated, and the years from which data were derived, are detailed in Table 3.1 and 3.2 respectively. This includes all species for which there was at least one estimable laying or fledging date. There were seven species which were not considered in the analysis for first egg laying date as they had less than 50 estimable dates: Hen Harrier, Buzzard, Dunlin, Short-eared Owl, Green Woodpecker, Lesser Spotted Woodpecker and Sand Martin. There were also seven species which were excluded from the analysis for fledging dates as they had less than 50 estimable dates or are nidifugous; Mute Swan, Hen Harrier, Moorhen, Lapwing, Dunlin, Green Woodpecker and Raven. There were no nest record cards in England available for Red-Throated Diver and Greenshank.

The 5, 50, 95 and 100 percentiles for the first egg laying date and fledging date for England as a whole are given in Table 3.3 and 3.4 for those species which had 50 or more nest record cards. Both first egg laying dates and fledging dates are expressed as numbers of days since 1 January (see Appendix 2 for a look-up table).

Appendices 3 and 4 gives the results of the significance test on the median first egg laying date and fledging date respectively for all those species which had sufficient sample size in at least two GORs. Forty-eight out of 64 species analysed showed a significant difference in first egg laying date between GORs, and 51 species out of 68 analysed showed a significant difference in fledging date between GORs. For those species which had a significant difference in median first egg laying date and fledging date, 5, 50, 95 and 100% percentiles are given for each GOR for first egg laying date and fledging date in appendices 5 and 6 respectively.

4. CONCLUSION

In assessing breeding periods for a large proportion of species in England, it would seem desirable to use the results from the BTO's Nest Record Scheme at the level of the individual GOR; for the majority of species where sample size allowed there was significant differences in the median first egg laying date and median fledging date between GORs. For the other species it is unclear as to whether breeding periods based on each individual GOR may be more accurate than a national breeding period for England as samples sizes were too small for a robust analysis at the present time. Breeding periods based on first egg laying dates and fledging dates can be determined for England based on the availability of percentiles for first egg laying dates for 87 species and for 97 species for fledging dates. For fledging dates, 63 species had sufficient sample size to enable the restriction of the analysis to those cards obtained after 1990. For first egg laying date, this is restricted to 61 species.

5. ACKNOWLEDGEMENTS

We are particularly grateful to the thousands of volunteer nest recorders who, over the years, have contributed their records to the NRS. We are also grateful to Alan Drewitt for his help with the project. The NRS is funded under the JNCC/BTO partnership that the JNCC undertakes on behalf of English Nature, Scottish Natural Heritage, Countryside Council for Wales and the Environment and Heritage Service in Northern Ireland. We are grateful to Angela Rickard for her expertise in formatting and presenting the report.

Percentiles italicised represent those species with sample sizes between 50 and 100 nest record cards. Dates are number of days since 1 January (see Appendix 2 for conversion to calendar days). Species names in bold letter face have a significant difference in their median first egg laying date between the nine Government Office Regions (GOR) in England. For significance of the test and the percentiles at the GOR level see appendix 3 and 5 respectively.

Corn Bunting	261	461	1990-2002	1966-2002	161	193	222	237				

Percentiles italicised represent those species with sample sizes between 50 and 100 nest record cards. Dates are number of days since 1 January (see Appendix 2 for conversion to calendar days). Species names in bold letter face have a significant difference in their median fledging date between the nine Government Office Regions (GOR) in England. For significance of the test and the percentiles at the GOR level see appendix 4 and 6 respectively.

APPENDIX 1 List of species considered for analysis and their conservation status in the UK

Red-throated Diver	Amber	Nightingale	Amber
Grey Heron	Green	Redstart	Amber
Mute Swan	Amber	Whinchat	Green
Hen Harrier	Red	Stonechat	Amber
Sparrowhawk	Green	Wheatear	Green
Common Buzzard	Green	Ring Ouzel	Red
Kestrel	Amber	Blackbird	Green
Merlin	Amber	Song Thrush	Red
Hobby	Green	Mistle Thrush	Amber
Peregrine	Amber	Grasshopper Warbler	Red
Moorhen	Green	Sedge Warbler	Green
Oystercatcher	Amber	Reed Warbler	Green
Ringed Plover	Amber	Lesser Whitethroat	Green
Golden Plover	Green	Whitethroat	Green
Lapwing	Amber	Garden Warbler	Green
Dunlin	Amber	Blackcap	Green
Common Snipe	Amber	Wood Warbler	Amber
Curlew	Amber	Chiffchaff	Green
Redshank	Amber	Willow Warbler	Amber
Greenshank	Green	Goldcrest	Amber
Common Sandpiper	Green	Spotted Flycatcher	Red
Stock Dove	Amber	Long-tailed Tit	Green
Collared dove	Green	Marsh Tit	Red
Turtle Dove	Red	Willow Tit	Red
Barn Owl	Amber	Blue Tit	Green
Little Owl	Green	Great Tit	Green
Tawny Owl	Green	Nuthatch	Green
Long-eared Owl	Green	Treecreeper	Green
Short-eared Owl	Amber	Jay	Green
Nightjar	Red	Magpie	Green
Kingfisher	Amber	Jackdaw	Green
Green Woodpecker	Amber	Rook	Green
Gt. Spotted Woodpecker	Green	Carriion Crow	Green
Ls. Spotted Woodpecker	Red	Raven	Green
Woodlark	Red	Starling	Red
Skylark	Red	House Sparrow	Red
Sand Martin	Amber	Tree Sparrow	Red
Swallow	Amber	Chaffinch	Green
Tree Pipit	Amber	Greenfinch	Green
Meadow Pipit	Amber	Goldfinch	Green
Rock Pipit	Green	Linnet	Red
Yellow Wagtail	Amber	Twite	Red
Grey Wagtail	Amber	Lesser Redpoll	Amber
Pied Wagtail	Green	Bullfinch	Red
Dipper	Green	Yellowhammer	Red
Wren	Green	Cirl Bunting	Red
Dunnock	Amber	Reed Bunting	Red
Robin	Green	Corn Bunting	Red

APPENDIX 2 Look up table for egg laying dates and fledging dates and equivalent calendar days

Date	Day	Month	Date	Day	Month	Date	Day	Month	Date	Day	Month
1 to 31 January											
32 to 59 February											
60	1	March	121	1	May	182	1	July	244	1	Sep
61	2	March	122	2	May	183	2	July	245	2	Sep
62	3	March	123	3	May	184	3	July	246	3	Sep

APPENDIX 3 Significance of the difference in median value for **first egg laying date** between the nine Government Office Regions (GOR) in England (species names in bold letter face are significant at 0.05 level).

Species	Chi-square value	No. of GOR regions	P value
Grey Heron	99.17	6	<.0001
Mute Swan	8.00	4	0.046
Sparrowhawk	12.29	4	0.0064
Kestrel	15.39	6	0.0088
Merlin	1.63	2	0.2014
Moorhen	34.24	8	<.0001
Oystercatcher	55.84	4	<.0001
Ringed Plover	7.71	5	0.1028
Lapwing	11.55	5	0.0211
Redshank	7.13	2	0.0076
Stock Dove	4.45	4	0.2164
Collared Dove	9.21	8	0.2377
Turtle Dove	4.04	3	0.1328
Nightjar	18.78	3	<.0001
Woodlark	2.46	2	0.1169
Skylark	41.98	4	<.0001
Swallow	51.54	8	<.0001
Tree Pipit	34.15	4	<.0001
Meadow Pipit	29.43	6	<.0001
Grey Wagtail	8.70	7	0.1913
Pied Wagtail	24.76	8	0.0008
Dipper	13.58	6	0.0185
Wren	47.71	8	<.0001
Dunnock	14.13	8	0.0489
Robin	56.33	9	<.0001
Redstart	65.49	7	<.0001
